• Translate UI designs from Figma into functional prototypes with clean code.
• Builds reusable Vue Components for client systems with awesome transitions and state managements [Vuex and Props methods based on use cases]
• Adhering to industry's best practices for code and security implementation.
• Occasionally writes or debugs server-side logic in Java Server Pages
• Participate in daily SPRINT sessions
• Manual Developer Testing of components before passing to UAT

Summary of what I did in our client's project
I am the Frontend Developer specialized in building Vue.js as Frontend framework and Vite.js as build tool as part of the modernization transition from MPA to SPA within the same application while ensuring sharing the same project's login session between old applications with the new one I had built for better UX and work with Putty, Maven and Apache Tomcat for deployment purposes. Successful implementation and transition
